
Recommended Security - Practices for Business Travellers

- 1.-** Use a Virtual Private Network (VPN) or encryption technology like WPA or WEP-enabling protocol to protect your data transmissions.

- 2.-** Disable the file-sharing option on the operating system (OS) to prevent hackers from accessing your hard drive and your private data.

- 3.-** Disable the peer-to-peer or ad hoc capabilities of the Wi-Fi system.

- 4.-** Install and use a personal firewall. Visit the following sites to access free trial versions of firewall systems:

http://www.sygate.com/swat/products/shield_ov.htm
<http://www.symantec.com/sabu/nis/npf/>
<http://www.networkice.com/>

- 5.-** Connect using only trusted, secure providers such as EKOPLC, providing end-to-end network security.
